Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. In the MB associated with all samples except CAWA-12-2020RA, naphthalene was detected. The associated sample results were NDs and, thus, were not qualified.
2. The ICAL %RSDs were >15% for bromoform and 1,2-dibromo-3-chloropropane. The associated sample results were NDs and, thus, were qualified UJ,V7a.
3. The ICAL and/or ICV/CCV RRFs were <0.05 but ≥ 0.01 for acetonitrile; n-butyl alcohol; propionitrile; and isobutyl alcohol. The associated sample results were NDs and, thus, were qualified UJ,V7b.
4. The ICV and/or CCV %Ds were >20% for dichlorodifluoromethane; acrolein; and 2-chloro-1,3-butadiene. The associated sample results were NDs and, thus, were qualified UJ,V7c.
5. The MSD %Rs did not meet laboratory acceptance criteria for several compounds. It should be noted that the MS and MSD parent sample was from another LANL RN and the raw data for the parent sample were not included in the package. It should also be noted that ten target analytes were not present in the MS/MSD spiking solution. Since MS/MSD analyses are not a client requirement for VOCs, no sample data were qualified as a result.

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

- The ICAL RRF was <0.05 but ≥ 0.01 for atrazine. The associated sample result was an ND and, thus, was qualified UJ,SV7b.
- The ICV and/or CCV %Ds were $>20\%$ for hexachlorocyclopentadiene; 4-nitrophenol; and 4-nitroaniline. The associated sample results were NDs and, thus, were qualified UJ,SV7c.
- The surrogate %R for 2-fluorophenol was $>$ the laboratory UAL for the MSD. This was a QC sample and, thus, no sample data were qualified as a result.
- The LCS %Rs were $<$ the laboratory LAL but $\geq 10\%$ for benzoic acid and benzidine. The associated sample results were NDs and, thus, were qualified UJ,SV12a.
- It should be noted that dinoseb; n-nitrosodiethylamine; n-nitrosodi-n-butylamine; and pentachlorobenzene were not present in the LCS, the MS, or the MSD. No sample results were qualified as a result.
- The MS/MSD %Rs and RPDs did not meet laboratory acceptance criteria for several compounds. It should be noted that the MS and MSD parent sample was from another LANL RN and the raw data for the parent sample was not included in the package. Since MS/MSD analyses are not a client requirement for SVOCs, no sample data were qualified as a result.

Comments/problems noted (include information about requests for further information submitted to the contract laboratory and agreed-upon date of resolution and contract laboratory point of contact):

1. It should be noted that the MS and MSD parent sample was from another LANL RN and the raw data for the parent sample was not included in the package. No sample data were qualified as a result.
2. It should also be noted that the raw ICAL data from the instrument used for the secondary HE analysis were not reported in the data package. Thus, the surrogate retention time criteria could not be evaluated. No sample data were qualified as a result.

- It should be noted that the matrix QC for all analyses except TOC were performed on parent samples from other LANL RNs. No sample data were qualified as a result.

Volatile Analysis

Case Narrative

**ChemStation Case Narrative
ARS International (ARSL)
SDG 12-718**

Method/Analysis Information

Procedure: Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer

Analytical Method: SW846 8260B DOE-AL

Analytical Batch Number: 1188640

Sample Analysis

The following client and quality control samples were analyzed to complete this SDG using the methods referenced in the Analysis Information section:

Sample ID	Client ID
295392001	CAWA-12-2018
295392004	CAWA-12-2020
1202599787	Method Blank (MB)
1202599788	295435003(CAWA-12-2023) Post Spike (PS)
1202599789	295435003(CAWA-12-2023) Post Spike Duplicate (PSD)
1202599790	Laboratory Control Sample (LCS)
1202599791	Laboratory Control Sample (LCS)
1202600766	Method Blank (MB)
1202600767	Laboratory Control Sample (LCS)
1202600768	Laboratory Control Sample (LCS)

NOTE: For volatile organic analyses the matrix spike designations may be indicated as "PS" or "PSD". The "PS" designation (post spike) indicates that the matrix was fortified prior to analysis but after applying any prep factors, such as a dilution. The laboratory considers the MS/MSD and PS/PSD designations interchangeable.

The samples in this SDG were analyzed on an "as received" basis.

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-038 REV# 16.

Raw data reports are processed and reviewed by the analyst using the Chemstation software package. False positives have been removed from the quantitation reports per standard operating procedures (SOP) section 19.1.2. False positive analytes are designated on the quantitation report with a 'd' qualifier.

Calibration Information

Please note that the 'Cal Date' indicated on each quantitation report reflects the date and time of the most recent calibrated analyte(s) in the processing method. Since the laboratory may calibrate with multiple solutions on different days using the same processing method, the software will update the 'Cal Date' to the last calibration file, date and time. The correct dates and times for all calibration files are located on the Calibration History report in the Standard Data section in the data package.

The surrogate compounds were calibrated using a minimum five-point calibration curve. The surrogates were added

by the auto sampler at a concentration of 50 ug/L. GEL Laboratories LLC will not have surrogate recoveries reported for Dibromofluoromethane. This is due to increased regulations for this analyte and an industry shortage.

A complete list of the initial calibration data files are shown in the Calibration History report located in the Standard Data section of the data package.

Initial Calibration

For any analytes that did not pass the x-intercept criteria of less than or equal to 3X MDL, they were put on Average at the request of the client because they were less than 60%.

Continuing Calibration Verification Requirements

All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement

Target analytes were detected in the blank 1202599787 (MB) below the reporting limit.

Surrogate Recoveries

Surrogate recoveries in all client and quality control samples were within the acceptance limits.

Laboratory Control Sample (LCS) Recovery

The LCS spike recoveries met the acceptance limits.

QC Sample Designation

Sample 295435003 (CAWA-12-2023) was designated for spike analysis.

Matrix Spike (PS) Recovery Statement

The spike recoveries were within the required acceptance limits.

Matrix Spike Duplicate (PSD) Recovery Statement

The spike duplicate 1202599789 (CAWA-12-2023) recoveries were not all within the acceptance limits. See the Data Exception Report in the miscellaneous section of the data package.

Relative Percent Difference (RPD) Statement

The RPDs between the matrix spike pair met the acceptance limits.

Internal Standard (ISTD) Acceptance

The internal standard responses in all client and quality control samples met the required acceptance criteria.

Technical Information

Holding Time Specifications

GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the ALPHALIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time.

Sample Preservation and Integrity

All samples met the sample preservation and integrity requirements.

Sample Dilutions/Methanol Dilutions

The samples in this SDG did not require dilutions.

Sample Re-extraction/Re-analysis

Sample 295392004 (CAWA-12-2020) was re-analyzed due to unacceptable recoveries in the initial analysis.

Miscellaneous Information

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Data Exception (DER) Documentation

DER # 1052528 was generated for this SDG.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment

Tentatively identified compounds (TIC) were required for this sample delivery group/work order. The tentatively identified compounds may include some silanols. These compounds were due to column or septum bleed and were not native to the affected samples. Please note that non-requested target analytes that are reported on the quantitation reports will not be present on the Form I. These detected analytes are included in the calibrated method and as a result cannot be reported on the TIC quantitation report.

Additional Comments

Sample 295392004 (CAWA-12-2020) was re-analyzed because the initial analysis contained possible carry-over from a previously analyzed sample. The client only provided one vial for the sample. As a result, the re-analysis aliquot was taken from a vial that contained head-space. See the Data Exception Report in the miscellaneous section of the deliverable.

Residual Chlorine

Residual Chlorine was not detected in any of the samples in this SDG.

System Configuration

The Volatile-GC/MS analysis was performed on the following instrument configuration:

Instrument ID	Instrument	System Configuration	Column ID	Column Description	P & T Trap

DATA EXCEPTION REPORT

Mo.Day Yr. 20-FEB-12	Division: Federal	Quality Criteria: Specifications	Type: Process
Instrument Type: VOA GC/MS	Test / Method: SW846 8260B DOE-AL	Matrix Type: Liquid	Client Code: ESHL
Batch ID: 1188640	Sample Numbers: 295388004, 295392004, 1202599789, 1202599789		
Potentially affected work order(s)(SDG): 295388(12-711),295392(12-718),295435(12-726) Application Issues: Sample Analyzed out of Holding Other Failed Recovery for MSD/PSD			
Specification and Requirements		DER Disposition:	
Exception Description:			
1. Sample 295388004 was analyzed out of hold. 2. QC sample 1202599789 (MSD) did not meet the acceptable criteria for Carbon disulfide and Iodomethane. Carbon disulfide: 132% (Limits of: 69.00% - 130.00%) Iodomethane: 127% (Limits of: 71.00% - 122.00%) 3. The second analyses of samples 295388004 and 295392004 were from client vials that contained "head space."		1. The sample was initially analyzed within holding. There was possible carry-over for 1,2,3-Trichlorobenzene in the initial analysis. The sample was re-analyzed within two times the recommended holding time which satisfies the client's criteria. Only 1,2,3-Trichlorobenzene was reported from the out of holding analysis. 2. The associated MS recovered at the upper limits for both of these analytes. The RPD criteria were met. The results are reported. 3. The client only supplied the VOA lab with one vial for each of the samples (295388004 and 295392004). Therefore, the re-analyses for these samples were from vials that contained "head space." The samples were re-analyzed because there was possible carry-over for 1,2,3-Trichlorobenzene in the initial analyses. Only 1,2,3-Trichlorobenzene was reported from the out of holding analyses.

Semi-Volatile Analysis

Case Narrative

**Semi-Volatile Case Narrative
ARS International (ARSL)
SDG 12-718**

Method/Analysis Information

Procedure: **Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry**

Analytical Method: SW846 8270C

Prep Method: SW846 3510C

Analytical Batch Number: 1186837

Prep Batch Number: 1186831

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8270C:

Sample ID	Client ID
295392001	CAWA-12-2018
1202595534	Method Blank (MB)
1202595535	Laboratory Control Sample (LCS)
1202595536	295270002(CAAN-12-2031) Matrix Spike (MS)
1202595537	295270002(CAAN-12-2031) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by GEL Laboratories LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-009 REV# 27.

Raw data reports are processed and reviewed by the analyst using the data analysis software package. False positives have been removed from the quantitation reports per standard operating procedures (SOP) section 18.2.

Calibration Information

Due to software limitations, the Form 6 may not indicate all the calibration files comprising the initial calibration. A complete list of the initial calibration data files are shown in the Calibration History report located in the Standard Data section of the data package. The various calibration mixes may not be calibrated using all of the calibration levels. In addition, not all of the mixes are calibrated using the same levels.

Diphenylamine has now superseded N-Nitroso-diphenylamine on Quantitation Reports, Initial Calibration Reports, Calibration Check Standard Reports, etc. Previous versions of EPA Methodologies referenced N-Nitroso-diphenylamine. However, as stated in EPA Methodology, "N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine." Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine will be reported as Diphenylamine on all reports and forms.

Initial Calibration

All initial calibration requirements have been met for this sample delivery group (SDG) in this batch. A second source initial calibration verification (ICV) was included in the standard section directly behind the initial calibration.

CCV Requirements

All associated calibration verification standard(s) (ICV or CCV) met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Statement

The MB analyzed with this SDG in this batch met the acceptance criteria.

Surrogate Recoveries

The MSD(1202595537) displayed one biased high surrogate. Please see the QC Summary for the specific recovery value. The MB, LCS and MS satisfied batch QC acceptance criteria (with the exception of Benzidine in the MS and MSD - see Spike Recovery Statements). Therefore, it was determined that the biased high failures were limited to the MSD sample only (the surrogate and spike recoveries were in general significantly higher in the MSD compared to the MS recoveries). Since the associated parent sample was reported as non-detected for all requested target analytes, a re-extraction was considered unnecessary and the data have been reported. Please see data exception report 1048967.

Laboratory Control Sample (LCS) Recovery

The LCS(1202595535) recovered Benzidine at 17.3% (limits: 23%-131%) and Benzoic acid 28.7% (limits: 30%-142%). The failures represented less than 5% of the total requested spike analyte list. That satisfied the acceptance criteria for the client and the data were reported. Please note, both Benzidine and Benzoic acid are designated as being poor responding analytes in the analytical method. This may account for the biased low recoveries for those analytes. Please see data exception report 1048967.

QC Sample Designation

Client sample 295270002 (CAAN-12-2031) from SDG 12-700 was selected for analysis as the matrix spike and matrix spike duplicate.

Matrix Spike (MS) Recovery Statement

The MS(1202595536) recovered Benzidine at 29.6%. The limits are 30%-120%. Since the MS(1202595536) and MSD(1202595537) displayed similar recoveries for Benzidine, the failures may attributed to matrix interference. Please note, Benzidine is designated as being poor responding analyte in the analytical method. This may account for the biased low recoveries for that analyte in the MS and MSD. Please see data exception report 1048967.

Matrix Spike Duplicate (MSD) Recovery Statement

The MSD(1202595537(CAAN-12-2031)) recovered Benzidine at 27.5%. The limits are 30%-120%. Since the MS(1202595536(CAAN-12-2031)) and MSD(1202595537(CAAN-12-2031)) displayed similar recoveries for Benzidine, the failures may attributed to matrix interference. Please note, Benzidine is designated as being poor responding analyte in the analytical method. This may account for the biased low recoveries for that analyte in the MS and MSD. The MSD(1202595537(CAAN-12-2031)) multiple biased high spike recoveries. Please see the QC Summary for the specific recovery values. The MB, LCS and MS satisfied batch QC acceptance criteria (with the exception of Benzidine in the MS and MSD - see Spike Recovery Statements). Therefore, it was determined that the biased high failures were limited to the MSD sample only (the surrogate and spike recoveries were in general significantly higher in the MSD compared to the MS recoveries). Since the associated parent sample was reported as non-detected for all requested target analytes, a re-extraction was considered unnecessary and the data have been reported. The MSD also recovered N-Nitrosopyrrolidine at 130% (Limits are 51-115%), Atrazine at 120% (Limits are 38-112%) and 3,3'-Dichlorobenzidine at 114% (Limits are 28-112%). The latter three analytes were not detected in the associated samples. The data is unaffected and are reported. Please see data exception report 1048967.

MS/MSD Relative Percent Difference (RPD) Statement

The MS(1202595536) and MSD(1202595537) displayed multiple RPD value failures. Please see the QC Summary for the specific recovery values. The RPD failures were attributed to the biased high recoveries in the MSD (see the Spike Recovery Statement).

Internal Standard (ISTD) Acceptance

The internal standard responses were within the required acceptance criteria for all samples and QC.

Technical Information:**Holding Time Specifications**

All samples in this SDG in this batch met the specified holding time. GEL assigns holding times based on the associated methodology that assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP. All reported compound mass spectra met the detection specifications in the method.

Sample Dilutions

The samples in this SDG in this batch did not require dilutions.

Sample Re-extraction/Re-analysis

The 1202595537(MSD) was re-analyzed. The re-analysis is reported.

Miscellaneous Information:**Data Exception (DER) Documentation**

Data exception report 1048967 was generated for this SDG.

Manual Integrations

Some initial calibration standards, continuing calibration standards, and/or samples may require manual integrations due to software limitations. Manual integrations, if any, are included with the raw data.

TIC Comment

Tentatively identified compounds (TIC) may be requested for this sample delivery group/work order. Please note that non-requested target analytes that are reported on the quantitation reports will not be present on the Form I. These detected analytes are included in the calibrated method and as a result cannot be reported on the TIC quantitation report. TIC data, if requested, are included on the Sample Data Summary (Form 1) and are also included with the sample raw data.

Additional Comments

Additional comments were not required for the SDG associated samples in this batch.

Electronic Package Comment

The following package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

System Configuration

The Semi-Volatile-GC/MS analysis was performed on the following instrument configuration:

Instrument ID	Instrument	System Configuration	Column ID	Column Description
MSD3.I	Agilent 7890A/5975C GC/MS w/ 7683 Autosampler	HP7890A/HP5975C	DB-5MS	25m x 0.2mm, 0.33um (5% Phenylmethylpolysiloxane)

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

- * A quality control analyte recovery is outside of specified acceptance criteria
- ** Analyte is a surrogate compound
- E Organics--Concentration of the target analyte exceeds the instrument calibration range
- J Value is estimated
- U Analyte was analyzed for, but not detected above the MDL, MDA, or LOD.
- DL Indicates that sample is diluted.
- RA Indicates that sample is re-analyzed without re-extraction.
- RE Indicates that sample is re-extracted.

Potentially affected work order(s)(SDG): 295270(12-700),295388(12-711),295392(12-718),295435(12-726)

Application Issues:

Failed Recovery for MS/PS
Failed RPD for MS/MSD, or PS/PSD
Failed Recovery for LCS/LCSD
Failed Yield for Surrogates
Failed Recovery for MSD/PSD

**Specification and Requirements
Exception Description:**

1. The LCS(1202595535) recovered Benzidine at 17.3% (limits: 23%-131%) and Benzoic acid 28.7% (limits: 30%-142%).
2. The MS(1202595536) and MSD(1202595537) recovered Benzidine at 29.6% and 27.5%, respectively. The limits are 30%-120%. The MSD also recovered N-Nitrosopyrrolidine at 130% (Limits are 51-115%), Atrazine at 120% (Limits are 38-112%) and 3,3'-Dichlorobenzidine at 114% (Limits are 28-112%).
3. The MSD(1202595537) displayed one biased high surrogate and multiple biased high spike recoveries. Please see the QC Summary for the specific recovery values.
4. The MS(1202595536) and MSD(1202595537) displayed multiple RPD value failures. Please see the QC Summary for the specific recovery values.

DER Disposition:

1. The failures represented less than 5% of the total requested spike analyte list. That satisfied the acceptance criteria for the client and the data were reported. Please note, both Benzidine and Benzoic acid are designated as being poor responding analytes in the analytical method. This may account for the biased low recoveries for those analytes.
2. Since the MS(1202595536) and MSD(1202595537) displayed similar recoveries for Benzidine, the failures may attributed to matrix interference. Please note, Benzidine is designated as being poor responding analyte in the analytical method. This may account for the biased low recoveries for that analyte in the MS and MSD. The latter three analytes were not detected in the associated samples. The data is unaffected and are reported.
3. The MB, LCS and MS satisfied batch QC acceptance criteria (with the exception of Benzidine in the MS and MSD - see item #2 above). Therefore, it was determined that the biased high failures were limited to the MSD sample only (the surrogate and spike recoveries were in general significantly higher in the MSD compared to the MS recoveries). Since the associated parent sample was reported as non-detected for all requested target analytes, a re-extraction was considered un-necessary and the data have been reported.
4. The RPD failures were attributed to the biased high recoveries in the MSD (see item #3 above).

System Configuration

The laboratory utilizes a Waters LC 2795 liquid chromatography instrument for primary analyte analysis. It is coupled with either a Micromass Quattro Micro Mass Spectrometer/ Mass Spectrometer, or a Micromass Quattro Ultima Mass Spectrometer/ Mass Spectrometer. Each being designated as LCMSMS #1 and LCMSMS #2, respectively. It is fitted with an APCI (Atmospheric Pressure chemical Ionization) probe that is operated in the negative ionization mode for the primary analyte analysis. The laboratory also utilizes an Agilent 1100 liquid chromatography instrument for either primary or secondary analyte analysis. It is coupled with an Applied Biosystems 4000 Mass Spectrometer/ Mass Spectrometer, designated as either LCMSMS #3 or LCMSMS #4. It is fitted with an APCI (Atmospheric Pressure chemical Ionization) probe that is operated in the negative ionization mode for both the primary and secondary analyte analysis.

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative will include the data validator's signature and title. The signature page also includes the data qualifiers used in the fractional package. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Chromatographic Columns

The detection of the primary analyte nitroaromatic and nitramines is accomplished through analysis on the following reversed phase column:

Phenomenex: Ultracarb 5u ODS (20), 250 x 4.60 mm ID.

The detection of the secondary analytes is accomplished through analysis on the following reversed phase column:

YMC: J'sphere ODS-H80, 150 x 4.6mm I.D.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages

electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Electronic Packaging Comment

This data package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory has developed systems to generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

h	Preparation or preservation holding time was exceeded										

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.
