|   | Revision: 0.0         | Effective Date: 10/16/07 |

## 1.0 PURPOSE AND SCOPE

The purpose of this procedure is to delineate the responsibilities, specific requirements, and process for sample containers, preservation techniques, and holding times as specified by field regulations and guidance documents within the Los Alamos National Laboratory (LANL or Laboratory) Environment & Remediation Support Services (ERSS) group. This procedure is applicable to ERSS activities involving the collection and chemical and physical preservation of samples that will be taken to the ERSS Sample Management Office (SMO) for subsequent chemical or physical testing. Subcontractors performing work under any ERSS program will follow this SOP for Sample Containers and Preservation.

## 2.0 BACKGROUND AND PRECAUTIONS

#### 2.1 Background

The use of specific types of sample containers and preservation techniques is mandatory for hazardous site investigations because the integrity of any sample is diminished over time. Physical factors (light, pressure, temperature, etc.), chemical factors (changes in pH, volatilization, etc.), and biological factors may alter the original quality of the sample. Because the various target parameters are uniquely altered at varying rates, distinct sample container, preservation techniques, and holding time have been established to maintain sample integrity for a reasonable and acceptable period of time.

#### 2.2 Precautions

The volume of sample collected should be sufficient to perform all the required analyses, plus an additional amount to provide for any quality control needs, split samples, or repeat examinations. The volumes, preservatives, and holding times are listed in Attachment 1.

If the samples were collected in an area controlled by a Radiological Work Permit, they must be released by HSR-1 prior to transfer to the SMO. The samples shall be preserved and secured at the site until the shipping requirements are met and the samples are removed from the site. Consult procedure EP-ERSS-SOP-5057, *ERSS Handling, Packaging, and Transporting Field Samples*, for handling and transporting samples.

Never clean and re-use bottles. Keep bottles in clean, dry place until the sample has been collected and is ready to be transferred to the appropriate container.

#### 3.0 EQUIPMENT AND TOOLS

| <ul> <li>Certified 300 series sample containers; available<br/>from vendors such as I-CHEM (J-CHEM Certified <sup>™</sup><br/>300 Series), Environmental Sampling Supply (ESS),<br/>etc.</li> </ul>   | Chemical preservatives as shown in Attachment 1. |
|---|--|
| [NOTE: A Certificate of analysis with a bar-coded<br>production number is typically in every case supplies by<br>the vendor. Each bottle in the 300 series has a bar-code<br>label for absolute traceability and is for use with the<br>automated sample tracking system. The certificate of<br>analysis should be retained for records.] |  |

|   | Revision: 0.0         | Effective Date: 10/16/07 |

#### 4.0 STEP-BY-STEP PROCESS DESCRIPTION

| Field Team<br>Member | 1.       | See Attachment 1 for proper sample containers and preservatives.  |
|----------------------|----------|---|
|                      | 2.       | Verify all materials are ready and available prior to going into the field, including all QC samples, such as trip blanks, field blanks, etc., that are required by the applicable Sample and Analysis plan (SAP).  |
|                      | 3.       | Obtain sample collection logs (SCL), and print chain of custody forms (COCs) and individual bottle identification stickers prior to going in the field.   |
|                      | 4.       | For sample collection, use only Certified 300 series sample containers that have been processed and meet or exceed "US EPA Specifications and Guidance for Contaminant-Free Sample Container" (Publication 9240.05A, EPA/540/R-93/051, December 1992).  |
|                      |          | [NOTE: Certified 300 series sample containers are available from vendors such as I-<br>CHEM (J-CHEM Certified <sup>™</sup> 300 Series), Environmental Sampling Supply (ESS), etc.]  |
|                      |          | [NOTE: A Certificate of analysis with a bar-coded production number is typically in every case supplies by the vendor. Each bottle in the 300 series has a bar-code label for absolute traceability and is for use with the automated sample tracking system. The certificate of analysis should be retained for your records.] |
|                      | 5.       | Verify all water samples for organics contain extra aliquots for the potential of laboratory quality control problems and/or breakage during shipment.  |
|                      | 6.       | Refer to the ERSS procedure EP-ERSS-SOP-5057, <i>Handling, Packaging, and Transporting Field Samples</i> , and follow all applicable transportation requirements.   |
|                      | 7.       | Document all pertinent comments and any deviations on the sample collection log/chain of custody or Field logbook.  |
| 4.2 Collec           | ting Sam | ples  |
| Field Team<br>Member | 1.       | <ul> <li>For all matrices, fill bottles in the following order:</li> <li>Volatile organics;</li> <li>Semi-volatile organics;</li> <li>Metals;</li> <li>Other inorganic parameters; and</li> </ul>   |

2. Take special consideration when sampling volatile organic constituents

| Title: Sample Containers and Preservation | No.: EP-ERSS-S0P-5056 | Page 4 of 14             |
|---|-----------------------|--------------------------|
|   | Revision: 0.0         | Effective Date: 10/16/07 |

| Field Team            | 3.        | Follow the following vial filling techniques for volatiles:   |
|-----------------------|-----------|---|
| Member<br>(Continued) |           | Add the preservative before the sample is taken.  |
| (00000000)            |           | • Pour liquid samples into the vials without introducing any air bubbles.   |
|                       |           | <ul> <li>If bubbling occurs as a result of vigorous pouring, discard the sample and refill<br/>the vial.</li> </ul>   |
|                       |           | • Completely fill the vial at the time of sampling so that when the septum cap is fitted and sealed, and the vial is inverted, no headspace is visible.   |
|                       |           | <ul> <li>Do not open appropriately filled vials again prior to analysis.</li> </ul>   |
|                       |           | [NOTE: Pea-sized bubbles may accumulate in the vials during transportation and storage due to solubility differences affected by temperature change. This should not adversely affect the sample integrity. This will happen during storage but should not be present at the time of sampling.] |
|                       | 4.        | Collect solid samples in the following manner:  |
|                       |           | <ul> <li>Collect the solid sample in EnCore <sup>™</sup> samplers, or fill the specific jar as<br/>completely as possible;</li> </ul>   |
|                       |           | <ul> <li>Tap the sides of the jar slightly during filling to try and eliminate as much air<br/>space as possible;</li> </ul>  |
|                       |           | <ul> <li>If samples are shipped to the laboratory in EnCore <sup>™</sup> samplers, extrude the<br/>samples and place them in sample containers within 48 hours of sample<br/>collection.</li> </ul>   |
|                       | 5.        | Collect sludge samples in the following manner:   |
|                       |           | <ul> <li>Take into consideration the consistency of the material since the analytical<br/>laboratory will extract or analyze the sample with respect to the relative pecent<br/>of liquid solid components;</li> </ul>  |
|                       |           | <ul> <li>If the sludge is mosly water with relatively low solid content (&lt;40% solids), use<br/>the appropriate water sample containers;</li> </ul>   |
|                       |           | <ul> <li>If the specific analysis to be performed is only applicable to a certain fraction of<br/>the sludge, note this on the analytical request form.</li> </ul>  |
| 4.3 Prese             | rving Sam | ples  |
| Field Team<br>Member  | 1.        | Determine the type of preservation required for the specific analyses requested for all samples in accordance with EPA SW-846 and established industry practices for use by accredited analytical laboratories by using Attachment 1.   |
|                       |           | [NOTE: Acid, base, or buffer preservative quantities to be added to samples shall be in accordance with Attachment 2.]  |

| Title: Sample Containe |         | iners and Preservation   | No.: EP-ERSS-S0P-5056   | Page 5 of 14   |  |  |
|------------------------|---------|--|---|--|--|--|
|                        |         |  | Revision: 0.0   | Effective Date: 10/16/07   |  |  |
| Field Team<br>Member   | 2.      | Preserve samples immediately following sample collection (except in the samples for organics analyses as described above).   |   |  |  |  |
| (Continued)            |         | [NOTE: The SMO does no   | t provide or perform preservation   | capabilities.]   |  |  |
|                        |         | [NOTE: The proper reagent for pH adjustment should be in an easily usable form tha<br>can be added at the time of sampling.]   |   |  |  |  |
|                        | 3.      | Store samples in a cooler with ice, or other appropriate cooling material, until they are delivered to the SMO by using the following process:   |   |  |  |  |
|                        |         | <ul> <li>Place the samples in an insulated container (cooler) and maintain on ice (ice<br/>bags or chemical "blue" ice) at 4° Centigrade within 8 hours of sample collect<br/>(where applicable); and</li> </ul>   |   |  |  |  |
|                        |         |  | sample, particularly when using a<br>ping it in bubble pack to isolate it t   | -  |  |  |
|                        | 4.      | Check the pH with pH paper if using an acid or base preservative; however, never insert the pH paper directly into the sample vial.  |   |  |  |  |
| 4.4 Impler             | nenting | Holding Times  |   |  |  |  |
| Field Team<br>Member   | 1.      | Consider holding times and shipment schedules when collecting samples in order to minimize potential effects to samples due to holding time concerns.  |   |  |  |  |
|                        |         | [NOTE: Holding times are shown in Attachment 1.]   |   |  |  |  |
|                        | 2.      | Use the sample collection date and time for the beginning of the holding time:   |   |  |  |  |
|                        |         |  | and the subcontract analytical labo   | ratory must use this   |  |  |
|                        |         | extracted/analyzed before<br>holding times are expresse<br>before the time frames exp  | nes are expressed in days, the sar<br>the time frames specified in Attacl<br>ed in hours then the sample must h<br>presses in Attachment 1 are excee<br>nces when collecting samples.]  | nple must be<br>nment 1 are exceeded.
