Dear Mr. Kieling:

Subject: **Transmittal of Information Requested During New Mexico Environment Department/Los Alamos National Laboratory Daily Technical Phone Call – Technical Area 55 Cemented Waste Stream Information**

The purpose of this letter is to transmit information requested during the New Mexico Environment Department (NMED)/Los Alamos National Laboratory (LANL) daily technical phone calls that are held as stipulated in the Administrative Order No. 5-19001 issued by the NMED. The U.S. Department of Energy (DOE) and the Los Alamos National Security, LLC (LANS), the Permittees, have enclosed with this letter information on cemented waste containers generated at Technical Area (TA) 55 that are currently in permitted storage units at TA-54, Area G. The information within Enclosures 1 and 2 described below partially fulfill #23 of the *Requested Information/Pending Issues* table included as part of the written daily submission associated with each daily technical phone call.

Enclosure 1 updates a summary table that was incorporated as Attachment 2 of *Daily Technical Call Submission – June 17, 2014*. The table titled *LANL Post-1991 Cemented TRU Waste Containers from TA-55 (LA-CIN-01.001) Both Cemented Monoliths and Cemented Cans* has been updated to include Real-Time Radiography (RTR) that was conducted on the remaining waste containers. The title of the table has also changed to *LANL Cemented TRU Waste Containers from TA-55 (LA-CIN-01.001) Received at TA-54 Area G Post-1991*.

Enclosure 2 is a table that includes information on container identification numbers, the location of the container, the form of the waste (cans or monoliths), and type of concrete used for stabilization of the waste ("Gypsum or Portland Cement" or "Portland Cement"). The date for each of the containers within the table reflects the storage receipt date at TA-54, Area G, as recorded on the waste storage records for that container. All of these containers have a "post-1991" date of receipt at TA-54 Area G. In all cases

the containers listed within the table were packaged prior to the date of receipt at TA-54, Area G, and may have been closed previous to the 1991. It is recognized that 1991 is the year after which all evaporator bottoms were stabilized at TA-55 using cementation.

Additionally, as part of the Laboratory's evaluation of generator data to identify unconsolidated nitrate salts in the aboveground transuranic (TRU) waste container population, all of the containers listed within the enclosed table were determined to hold a cemented waste - not unconsolidated nitrate salts. Finally, the type of concrete used for stabilization has also been determined by the evaluation of generator data. From 1997 to the present, TA-55 has used only Portland cement to stabilize evaporator bottoms. The type of concrete was determined based on the date of container closure ("1996 or before" or "1997 to present").

Information on pH adjustment during the stabilization process for wastes that are cemented at TA-55 and the anticipated pH of any free liquids that may be present after cementation necessary to complete the NMED request for #23 of the *Requested Information/Pending Issues* table will be transmitted under a separate cover after the planned meeting on July 18, 2014. If you have comments or questions regarding this submittal, please contact Mark P. Haagenstad at (505) 665-2014 or Gene E. Turner at (505) 667-5794.

Dear Mr. Kieling:

Subject: Transmittal of Information Requested During New Mexico Environment Department/Los Alamos National Laboratory Daily Technical Phone Call – Technical Area 55 Cemented Waste Stream Information

The purpose of this letter is to transmit information requested during the New Mexico Environment Department (NMED)/Los Alamos National Laboratory (LANL) daily technical phone calls that are held as stipulated in the Administrative Order No. 5-19001 issued by the NMED. The U.S. Department of Energy (DOE) and the Los Alamos National Security, LLC (LANS), the Permittees, have enclosed with this letter information on cemented waste containers generated at Technical Area (TA) 55 that are currently in permitted storage units at TA-54, Area G. The information within Enclosures 1 and 2 described below partially fulfill #23 of the *Requested Information/Pending Issues* table included as part of the written daily submission associated with each daily technical phone call.

Enclosure 1 updates a summary table that was incorporated as Attachment 2 of *Daily Technical Call Submission – June 17, 2014*. The table titled *LANL Post-1991 Cemented TRU Waste Containers from TA-55 (LA-CIN-01.001) Both Cemented Monoliths and Cemented Cans* has been updated to include Real-Time Radiography (RTR) that was conducted on the remaining waste containers. The title of the table has also changed to *LANL Cemented TRU Waste Containers from TA-55 (LA-CIN-01.001) Received at TA-54 Area G Post-1991*.

Enclosure 2 is a table that includes information on container identification numbers, the location of the container, the form of the waste (cans or monoliths), and type of concrete used for stabilization of the waste (“Gypsum or Portland Cement” or “Portland Cement”). The date for each of the containers within the table reflects the storage receipt date at TA-54, Area G, as recorded on the waste storage records for that container. All of these containers have a “post-1991” date of receipt at TA-54 Area G. In all cases

ENCLOSURE 1

LANL Cemented TRU Waste Containers Generated from TA-55 - Currently Stored Above-Ground at Area G

LEGEND

Current Container ID Number	Current Container ID Number (parent or daughter)
Original Container ID Number	Original Parent container ID as recorded in the waste tracking database "Waste Compliance and Tracking System" (WCATS) and predecessor database systems to WCATS
If Overpacked, Container ID Number	If overpacked into a container, new container number of the overpack.
Current Waste Stream	Current AK waste stream as recorded in the Central Characterization Project's (CCP's) AK Tracking Spreadsheet.
Cement Type	Cement type is based on the process(es) in place at TA-55 at the time the container was closed and review of documentation. Containers can be either a cement type of "Gypsum" or "Portland Cement."
Date - Waste Storage Record - Storage Receipt Date	Date of initial receipt for storage at TA-54, Area G - as recorded on the waste storage record for the parent container. In all cases the containers listed within the table were packaged prior to the date of receipt at TA-54, Area G, and may have been closed previous to the 1991 date that is recognized as the date after which all evaporator bottoms were stabilized at TA-55 using cementation.
Current Location	Location of the current container.
RTR or RTR Pre-Screen Result	Result of RTR or RTR Pre-Screen.
Liquids	Presence of liquids based on RTR or RTR Pre-Screen information.

Current Container ID Number	Original Container ID Number	If Overpacked, Container ID Number	Current Waste Stream	Cement Type	Date - Waste Storage Record - Storage Receipt Date	Current Location	RTR or RTR Pre-Screen Result	Liquids
