Subject: Emergency Treatment Permit
Date: Thursday, October 12, 2017 12:59:00 PM

Dear Mr. Kieling and Janine Kraemer:

The Los Alamos National Laboratory (LANL) Environmental Protection and Compliance Division (EPC-DO) personnel were notified on October 12, 2017 by Emergency Management and Response (EM&R) personnel regarding the discovery of 100-150 ml of Tetrahydrofuran in a container with crystals at Technical Area (TA) 3-1698, room C208. Emergency Response personnel have deemed the situation an imminent and substantial threat and endangerment to human health and the environment. Emergency Response personnel have determined the safest path forward for treatment to be on-site (TA-3) through contained vessel detonation. The treatment will be conducted in accordance with 40 CFR 270.1(c)(3). Upon completion of emergency treatment, all remaining residual material, if any, will be collected and properly managed.

Your immediate response regarding this matter is greatly appreciated. Please contact me if additional information would be helpful.

Thank you,

Angela Martinez Edwards
