Mr. Ricardo Maestas, Acting Chief Hazardous Waste Bureau New Mexico Environment Department 2905 Rodeo Park Drive East, Building 1 Santa Fe, NM 87505-6313

Subject: Fiscal Year 2023 Reporting of Releases and Instances of Noncompliance with the Los Alamos National Laboratory Hazardous Waste Facility Permit

Dear Mr. Maestas:

The United States Department of Energy (DOE) and its field offices, the National Nuclear Security Administration-Los Alamos Field Office (NA-LA) and the Environmental Management-Los Alamos Field Office (EM-LA), along with Triad National Security, LLC (Triad) and Newport News Nuclear BWXT-Los Alamos, LLC (N3B), collectively the Permittees, submit the enclosed report, *Fiscal Year 2023 Reporting of Releases and Instances of Noncompliance with the Los Alamos National Laboratory Hazardous Waste Facility Permit* (Report) to the New Mexico Environment Department-Hazardous Waste Bureau (NMED-HWB).

The Report is required by the Los Alamos National Laboratory Hazardous Waste Facility Permit (Permit) Section 1.9.13, *Written Reporting of a Non-threatening Release* and Permit Section 1.9.14, *Other Noncompliance*, and includes information for the Los Alamos National Laboratory (EPA ID #NM0890010515). The Permit requires the Permittees to report all instances of noncompliance with the Permit and to report any releases (at or from permitted units) that did not pose a threat to human health or the environment. The Permit requires that the Report be submitted annually by December 1 for the fiscal year ending September 30.

Enclosure 1 addresses instances of noncompliance with the Permit and releases at permitted units under operational control of NA-LA/Triad. Enclosure 2 addresses instances of noncompliance with the Permit and releases at permitted units under operational control of EM-LA/N3B. Each enclosure includes a certification page from the responsible Permittees.

If you have questions or comments for Triad concerning this submittal, please contact Robert A. Gallegos (NA-LA) at (505) 901-3824 or by email <u>robert.gallegos@nnsa.doe.gov</u>, or Jason Hill (Triad) at (505) 551-2218 or by email at <u>jshill@lanl.gov</u>.

If you have questions or comments for N3B concerning this submittal, please contact Arturo Duran (EM-LA) at (575) 373-5966 or by email at <u>arturo.duran@em.doe.gov</u>, or Christian Maupin (N3B) at (505) 695-4281 or by email at <u>christian.maupin@em-la.doe.gov</u>.

Sincerely,

Robert A. Gallegos Digitally signed by Robert A. Gallegos Date: 2023.11.29 09:36:54 -07'00'

Robert A. Gallegos Permitting and Compliance Program Manager National Nuclear Security Administration Los Alamos Field Office U.S. Department of Energy Sincerely,

Introduction

This annual report has been prepared by the U.S. Department of Energy (DOE), National Nuclear Security Administration-Los Alamos Field Office (NA-LA), and Triad National Security, LLC (Triad), to meet a reporting requirement of the Los Alamos National Laboratory (LANL or the Laboratory) Hazardous Waste Facility Permit (the Permit). Permit Sections 1.9.13 and 1.9.14 require reporting of: (1) any non-threatening release of hazardous waste or constituents from or at a permitted unit and (2) all instances of noncompliance with the Permit. Accordingly, this report must be submitted to the New Mexico Environment Department-Hazardous Waste Bureau annually, by December 1, for the previous year ending September 30. This report covers the reporting period October 1, 2022, through September 30, 2023.

Please note that this enclosure addresses only releases and instances of noncompliance at permitted units under operational control of Triad. None of the identified releases or incidents of noncompliance detailed within this report posed a potential threat to human health or the environment.

Facility Information

Owner and Operator:

United States Department of Energy 3747 West Jemez Road, MS A316 Los Alamos, NM 87544

Co-Operator:

Triad National Security, LLC PO Box 1663 Los Alamos, NM 87545

Facility:

Los Alamos National Laboratory Bikini Atoll Road, SM-30 Los Alamos, NM 87545

Releases from or at a Permitted Unit

During the reporting period, there were seven releases within or from a permitted unit under operational control of Triad. Regarding the term "release" as used in this report, the Permit defines a release as "any accidental or intentional spilling, leaking, pouring, emitting, emptying, discharging, injecting, pumping, escaping, leaching, or dumping of any hazardous waste or hazardous constituents inside a permitted unit or from a permitted unit to the environment, including the abandonment or discarding of barrels, containers, and other closed receptacles containing hazardous waste or hazardous constituents."

None of the releases or spills from or at a permitted unit resulted in migration outside of the building and none threatened human health or the environment.

TA-55-4, Mixed Waste Storage Tank System

On October 3, 2022, a leak of approximately one ounce of fluid was discovered on the elbow of a drain manifold of the filtrate tanks because of a defective weld. On October 4, the defective weld was wrapped with plastic and fiberglass tape. The affected tank is not part of permitted unit, and the material is not a waste. The corrective action plan includes replacement of the elbow through a programmatic work request. Operations staff continue to monitor the wrap and aspirate the line with air to keep it dry.

An Affidavit of Non-Use for this unit was filed for CY 2022 and this room remains used for operations and is not used for waste management activities at this time.

The release at this permitted unit was not a risk to the public, human health, or the environment. The release occurred within an indoor location with no potential for migration to the outside; therefore, there was no impact to Solid Waste Management Units (SWMUs), Areas of Concerns (AOCs), or water courses near the building.

TA-55-4, Mixed Waste Storage Tank System

On July 25, 2023, during a routine room sweep, a nitric acid leak of approximately 2 milliliters was detected under a drain tank valve. A programmatic work request was immediately issued by the operator who discovered the leak to repair the drain tank valve. A recovery plan was developed on July 25, 2023.

The spill was cleaned up July 26, 2023, and the valve was replaced on the morning of July 27, 2023, which resulted in this action being closed.

An Affidavit of Non-Use for this unit was filed for CY 2022 and this room remains used for operations and is not used for waste management activities at this time.

The release at this permitted unit was not a risk to the public, human health, or the environment. The release occurred within an indoor location with no potential for migration to the outside; therefore, there was no impact to SWMUs, AOCs, or water courses near the building.

TA-55-4, B40

On January 4, 2023, approximately one gallon of liquid was found spilled on the tile floor during a daily inspection. The liquid was determined to be water after a sample of the liquid was taken, radiation analysis determination was non-detect, and the pH was found to be neutral. The source of the spill was determined to be caused by a faulty electric valve of nearby heating, ventilation, and air conditioning chilled water unit. The water did not encounter waste

Fiscal Year 2023 Reporting of Releases and Instances of Noncompliance with the Los Alamos National Laboratory Hazardous Waste Facility Permit U.S. Department of Energy, National Nuclear Security Administration-Los Alamos Field Office and Triad National Security, LLC

drums or drains in the unit. The water was cleaned up and analyzed on January 4, 2023, and this action was closed out.

The release at the permitted unit was not a risk to the public, human health, or the environment. The release occurred within an indoor location with no potential for migration to the outside; therefore, there was no impact to SWMUs, AOCs, or water courses near the building.

TA-55-4, K13

On February 10, 2023, an eyewash valve was found to have been accidentally left in the open position and approximately two gallons of water was spilled into the unit. The water was sampled for radiation and determined to be not detected, the pH was also found to be neutral. The water did not encounter waste drums or floor drains.

The water was cleaned up, and the valve was inspected and determined to be in working order. This action was closed on February 10, 2023.

The release at this permitted unit was not a risk to the public, human health, or the environment. The release occurred within an indoor location with no potential for migration to the outside; therefore, there was no impact to SWMUs, AOCs, or water courses near the building.

TA-55-4, B40

On March 13, 2023, the fire suppression system released water that encroached on the boundary of the permitted unit. The release was approximately 4,700 gallons of water. The water did not enter the unit boundary, but the Permittees are conservatively reporting this incident.

The water was sampled, determined to contain nondetectable radioactivity, and sent to the Radioactive Liquid Waste Treatment Facility (RLWTF) due to the volume of the water. The water release was due to a shorted wire, which was replaced/rerouted. The fire suppression system in the area is being re-evaluated for other vulnerabilities. All affected high efficiency particulate air filters (42 total filters) were replaced, all of the demisters were replaced, the plenum cooling coils were inspected, the affected fan housing was inspected, and the thermal detector (which triggered the event), was troubleshooted and fixed. The electricians were retrained on the necessity of running electrical wire for the fire suppression system through protected electrical conduit, and this action was closed on March 22, 2023.

The release, adjacent to this permitted unit, was not a risk to the public, human health, or the environment. The release occurred adjacent to the indoor unit with no potential for migration to the outside; therefore, there was no impact to SWMUs, AOCs, or water courses near the building.

TA-55-4, B40

On March 25, 2023, a nearby sump pump backed about 30 gallons of water into B-40 when a float failed to activate and shut off when the sump filled. The water came from a fire protection

Fiscal Year 2023 Reporting of Releases and Instances of Noncompliance with the Los Alamos National Laboratory Hazardous Waste Facility Permit U.S. Department of Energy, National Nuclear Security Administration-Los Alamos Field Office and Triad National Security, LLC

system that was activated accidentally. The sump is not located within the permitted unit and the water did not contact any drums. After testing, it was determined to be water and was subsequently sent to the RLWTF. The sump pump was subsequently replaced and tested to ensure the new pump worked as designed as part of the corrective action, and the action was closed on March 28, 2023.

The release at this permitted unit was not a risk to the public, human health, or the environment. The release occurred within an indoor location with no potential for migration to the outside; therefore, there was no impact to SWMUs, AOCs, or water courses near the building.

TA-55-4, B40

On September 14, 2023, a liquid spill of approximately 1 gallon of water was observed on the floor within the permitted unit. The spill cause was determined to be the same equipment that caused the January 4, 2023, event. A work order to install a water diverter was completed on September 27, 2023, and the action was closed on September 27, 2023.

The release at this permitted unit was not a risk to the public, human health, or the environment. The release occurred within an indoor location with no potential for migration to the outside; therefore, there was no impact to SWMUs, AOCs, or water courses near the building.

Instances of Noncompliance with the Permit

From October 1, 2022, through September 30, 2023, Triad documented a total of eleven (11) instances of noncompliance with the Permit. These occurrences are provided in Enclosure 1, Table 1. The instances of noncompliance are organized by unit location.

Summary of Corrective Actions

As part of the LANL commitment to environment, health, and safety (EHS), excellence and continuous improvement, the Permittees are dedicated to ongoing efforts to evaluate, refine, and optimize pollution prevention, waste minimization, and environmental management systems, processes, and tools to ensure compliance with the Permit. Facility operators, EHS subject matter experts, and waste management personnel continue to identify and implement corrective actions and communicate lessons learned, such as a feedback process to confirm that weekly inspections have been conducted, as a best management practice to ensure compliance.

Table 1. Fiscal Year 2023 Noncompliance Report

Date of Discovery	Permitted Unit Location	Noncompliance	Quantity of Material	Number of Instances	Period of Noncompliance	Steps Taken to Resolve	
10/18/2022	03-0029-9020	During a routine inspection, it was discovered that the 24-inch aisle spacing requirement was not maintained. This is a noncompliance with Permit Section	(1) standard waste box; (14) 55-gallon drums	1	10/18/2022–10/19/2022	The unit owner rearranged the standard waste box to provide the required aisle space, and the drums were shipped offsite for disposal. The waste operators were retrained to ensure that they	
		3.5.1(1).				understood and were implementing proper aisle spacing requirements.	
10/18/2022	03-0029-9020	The waste label could not be inspected without moving the container. This is a noncompliance of Permit Section 3.8(2).	(1) standard waste box	1	10/18/2022–10/19/2022	The standard waste box was rearranged to allow the label to be inspected without moving the container. The waste operators were retrained to ensure that they understood and were implementing proper labeling requirements.	
06/19/2023	63-0149	The hazard indicator (toxic) was missing from the container. This is a noncompliance with Permit Section 3.6(1).	(1) 55-gallon drum	1	06/19/2023–06/19/2023	The appropriate hazard indicator sticker for toxicity was applied to the container label as soon as the issue with the missing hazard indicator was discovered. Operators were retrained with specific emphasis that when damaged labels are replaced with new labels, the hazard indicators must be reapplied to the new labels in accordance with generator requirements.	
6/06/2023	55-4-K13	The Contingency Plan Quick Reference Guide was found to be not current. This is a noncompliance with Permit Section 2.11.12.	1 guide	1	2/1/2023–06/06/2023	The Contingency Plan Quick Reference Guide was updated to the current version. A backup contact for the unit was trained to ensure that future updates to Permit-required documents for the unit are properly disseminated.	
6/06/2023	55-4-K13	Two containers in the unit were not identified in the operating records. This is a noncompliance with Permit Section 2.12.2.	2 drums	1	06/01/2023–06/06/2023 and 03/01/2023– 06/06/2023	The operating records were updated to reflect the missing containers. The hazardous waste management unit workers were reminded that the operating record needs to match what is physically present in the unit.	
6/06/2023	55-4-K13	Eyewash station was not accessible due to scaffolding blocking the eyewash station. This is a noncompliance with Permit Section 2.10.	1 piece of equipment	1	06/06/2023–06/07/2023	The scaffolding was moved so that the eyewash station was accessible for use. Maintenance managers were asked to reiterate to the craft that emergency equipment must be accessible at all times and that at no time can anything be left blocking the emergency equipment.	

Table 1. Fiscal Year 2023 Noncompliance Report

Date of Discovery	Permitted Unit Location	Noncompliance	Quantity of Material	Number of Instances	Period of Noncompliance	Steps Taken to Resolve
02/27/2023	55-4-B05	A hazardous waste management unit worker's RCRA Refresher training was found to have expired. This is a noncompliance of Attachment F of	1 person	1	02/22/2023–02/27/2023	The hazardous waste management unit worker completed the RCRA Refresher training on 2/27/2023.
		the Permit.				
08/28/2023	55-4-B13	Treatment, storage, and facility personnel were unable to conduct the required daily hazardous waste inspections because the room was being evaluated by radiological control technicians.	Not applicable	1	08/28/2023–9/17/2023	The unit was reopened on 09/17/2023, and the inspection was completed. The missed inspections were recorded in the operating record.
		This is a noncompliance of Permit Section 2.6.1.				
10/17/2023	Not applicable	In fiscal year 2023, three documents from the New Mexico Environment Department- Hazardous Waste Bureau to the Permittees were not placed in the LANL Public Reading Rooms (electronic and hardcopy) until after the 10 days required by Permit Section 1.10.	Not applicable	3	10/19/2022–11/15/2023 10/26/2022–11/15/2023 6/22/2023–6/30/2023	When the mistake was recognized, correspondence was placed in the LANL Public Reading Rooms. In two instances, internal document distribution was not fully completed. In the third instance, the document was delayed awaiting receipt of the official correspondence. Efforts to remind personnel of the available communication avenues for all incoming correspondence are regularly restated, and the Permittees will continue to work to ensure that correspondence is received by the correct personnel in a timely manner.

Date

1.0 INTRODUCTION

This report has been prepared by the U.S. Department of Energy (DOE) Environmental Management Los Alamos Field Office (EM-LA) and Newport News Nuclear BWXT-Los Alamos, LLC (N3B), collectively the Permittees, to meet the reporting requirements of the Los Alamos National Laboratory Hazardous Waste Facility Permit (the Permit). Permit Sections 1.9.13 and 1.9.14 require reporting any nonthreatening releases of hazardous waste or constituents from, or at, a permitted unit, and all instances of noncompliance with the Permit. This report must be submitted by December 1 of each year.

This report addresses N3B-operator-associated releases and instances of noncompliance from October 1, 2022, through September 30, 2023.

- There were no releases of hazardous waste or constituents from or within permitted areas.
- None of the instances of Permit noncompliance detailed in this report posed a potential threat to human health or the environment.
- For a portion of the reporting period, because of nuclear safety concerns, two containers with liquids could not be placed on secondary containment until EM-LA approval was obtained for an evaluation of the safety in moving the containers. Although this condition was ultimately corrected, during the noted period, multiple compensatory measures were in use, including daily inspections of the containers and the use of absorbent socks/pads around each container.
- All noncompliance issues have either been corrected or are in the process of correction to achieve compliance.

3.0 RELEASES FROM OR WITHIN A PERMITTED UNIT

During the period of October 1, 2022, through September 30, 2023, there were no releases at, or from, a permitted unit under EM-LA/N3B management.

4.0 INSTANCES OF PERMIT NONCOMPLIANCE

From October 1, 2022, through September 30, 2023, five instances of Permit noncompliance were documented. A summary of the Permit noncompliance instances is provided in Table 1.

5.0 SUMMARY OF IMPROVEMENTS

N3B is working to improve the identification of Permit noncompliance through ongoing training for all personnel involved with Permit implementation. In addition, waste management policies and procedures are continually reviewed and revised to reflect best management practices and actual working conditions to ensure Permit-compliant operations.

Staff recently received refresher training for inspection and labeling procedures, and Contact-Handled Transuranic Waste staff attended workshops to promote Resource Conservation and Recovery Act permit knowledge. These refresher trainings are ongoing.
