Data quality codes:											
V - Valid Data											
VQ - Data are considered valid with some validity question.											
VR - Data are considered valid but with reduced measurement accuracy.											
VRVQ - Reduced measurement accuracy with validity question.											
Validation reason codes:											
BT - Water level is below transducer, data are not valid.											
DI - Data values interpolated using manual measurement values.											
E - Equipment malfunction.											
KP - Transducer water level measurement derived from known point of transducer.											
MA - Measurement tool or method accuracy not optimal.											
MMNA - Manual water level measurement not available.											
NC - Non-conforming water level data for zone.											
Pi - Pressure data is Pi not Po.											
RL - Manual measurement for reference level not documented or in question.											
WS - Water level measured in sump.
